

Metal Roofing and Cladding Accessories

The complete package

RigiSystems has pioneered the systems approach to roofing. This approach ensures compatibility between components, and more importantly results in a roof which performs according to its design criteria in all respects.

As part of this systems approach, RigiSystems has introduced a range of innovative products and accessories that sets an industry standard for the standing seam market, enabling us to offer, from stock, a complete range of fixings and other accessories to suit any roofing application.

We also offer a complete range of soffits, fascias etc and can make bespoke fabrications to individual specification and to the tightest of deadlines.

Apart from the benefits of one stop shopping, the complete approach to the whole system is the only way that the integrity of that system can be guaranteed, or that it can be shown to have compliance with the ever more stringent Building Regulations and Technical Standards.

Other benefits of buying from a single source include being able to eliminate problems of colour matching or other incompatibilities, since we are able to ensure that fascias and accessories are produced from the same batch of coated coil as the top sheet. More importantly, the systems approach enables us to calculate variations in terms of acoustic properties and thermal transmissions to suit different applications, as well as loading capabilities, impact resistance etc.

At RigiSystems we have developed an in-depth knowledge of not just the individual components, but how they interact to make up the system.

Fasteners

The extensive range of carbon and stainless steel fasteners offers a most comprehensive and technically sophisticated range of fixing systems.

- Single skin fasteners
- Stitching products
- Cladding fasteners
- Rivets
- Self tapping screws
- Stainless steel drillscrews
- Standing seam system fasteners
- High threads for composite panels
- Single ply roofing fasteners

Metal Roofing Components

RigiSystems produce an extensive range of preformed metal roofing components to complement all types of metal roofing and cladding products.

All metal roofing components are manufactured to individual specification from the wide stock of coated products. This enables bespoke items to be turned around in the shortest time possible to meet even the tightest of deadlines.

- Single skin gutter systems
- Insulated gutters metal and membrane lined
- Gutter brackets
- Ridge corner and eaves flashings
- Curved and bullnose flashings
- Fixed blade louvres
- Welded soakers and kerb units
- Special fabrications
- Rainwater products

GRP and Polycarbonate Rooflights

By adopting the most up to date production technology, our rooflights easily withstand harsh environmental conditions, yet provide maximum levels of evenly distributed natural light without glare or excessive shadows.

- Factory assembled insulated
- Single skin
- Double skin
- Dome
- Barrel vault
- Part L compliant
- ACR(M)001:2000 compliant
